

Troy 480[®]

MAPP No. 12341
Last updated March 2015

Vining Peas Variety List

Now on the Birds Eye Preferred List

Apply **TROY 480** when the peas have three nodes (3 fully expanded leaves) until before the flower buds can be found enclosed in the terminal shoot. The optimum timing is when the majority of weeds have germinated, but are still at the seedling stage.

A satisfactory leaf wax test using crystal violet marker dye must be performed before applying TROY 480, particularly with early drillings which tend to have less leaf wax.

Maximum individual dose	Maximum number of treatments	Supported tank-mixes
3.0 l/ha	1	TROY 480 3.0 + Bellmac Straight 3.75

*These varieties are known to be early maturing so ensure that they are treated at the correct growth stage.

*Avola (spring)	*Feltham First	*Kelvedon Wonder	*Sparkle
*Banff	*Hurst Beagel	*Progress No. 9	*Sprite
*Early Onward	*Jade	*Span	*Tessa

Varieties highlighted in bold have been shown to be slightly sensitive and slight scorch may occur when **TROY 480 + Bellmac Straight** is used.
